

1 Teaching Comment from students

Subject: Calculus 2(MTH 133)

Semester: Fall 2025

Instructor: Rahul Ghosh, Hong Sheng Tan

Comments:

1. Great recitation, you guys explain problems and give tons of help whenever needed.
2. Recitation is very helpful, the TA's are respectful and truly want to help students to do their best. They work hard to get student to succeed. One complaint is the exam multiple choice being a high amount of points per question.
3. I think there should maybe be a short questions period. Suggest to work through problem to start the class.
4. I think going over problems on the board for everyone, like you did today is better than dragging the small board around. The work in the recitation is good, although I have found it a bit too easy. If there were harder problem I think it would make us more comfortable on quizzes and exam.
5. I liked when you did the problem on the board it was very helpful.
6. I think overall recitations were very helpful especially the later we got in the semester, as the TA's would go over the problems, and try to help individually. The recitation was definitely more helpful than the lecture videos 9 out of 10 times.

7. Maybe you could just do problems on the board upfront, rather than several different times around the class. Also since you had said that the material in our recitation is sometime we should study least, perhaps you could make the material more practical.
8. Very helpful in answering questions and helping with examples. Really helpful with exam review and preparation.
9. You guys were very nice and respectful of us but having a time at the beginning of class to ask question or go over confusing parts of the homework as a class would be benificial.
10. Going over the problems is really helpful, I like when students write out their process on the whiteboard.
11. Class set up would be more benificial as a lecture just going through the problem throughout the hour with enough time for us to ask questions instead of everyone being confused the whole time then quickly doing the problems at the end. Overall TA's are very kind and helpful in this difficult course.
12. I think the recitation was good but I think going through the problems at the end of the class helped very well. Maybe also it would be better if it was a little slowed down.
13. This is my second time taking Calc 2 and this recitation was helpful a lot more than it did last year. It is extremely helpful that you walk around and explain in depth each recitation problem, as well as going over exam content.
14. It was alright, but sometimes I'd like to be left to work independently. Also, I really like wrapping up with the full class.

15. I quite enjoyed this recitation class. Both TA's were extremely helpful and explained problems I did not understand. Overall, I would change little about this class.
16. Making sure you have enough time to throughly review the problems at the end of class.
17. Really liked the help during the recitation. I didn't like that recitations were graded on timed completion of specific problems, felt like I sacrificed learning to try and write down problems I didn't get to work through. Overall, you guys were amazing and I really appreciated your help.
18. More demonstrations on the board would be helpful.
19. You tend to simply solve a problem yourself or given the answer instead of explaining when a student has doubts.
20. Both TA's are very helpful and offer help often. I think it may be better to put students into groups based on their confidence in the material.
21. You guys are very helpful and good at explaining difficult problems.
22. The TA's were very helpful in understanding the questions on exams.
23. I liked you guys through you are helpful down the road, not so much at the beginning. You did a solid job.
24. You guys were very helpful when we asked questions. You could go over the problems at the end of each recitation.

25. The recitation were fine. The walkthrough with the problems was really beneficial to mine understanding of the problems.
26. Go through problems on the board more often.
27. I like how you all are helpful while taking exam's explaining the reviews at the end of class.
28. Demonstrate how to do the problems earlier in the class.
29. Good work, the class was taught well.
30. I dont have any issues, you guys did well.
31. I like the way class is ran, it is especially helpful when you go over the problems at the board.
32. TA's are fine with the way they teach the class. They try their best to help everyone and care about their students.
33. The instructor did a fantastic job with the difficult of the class and available resources. Thank you!
34. Not sure, helpful TA though.
35. Make a groupme to get easy access to questions, important notices, etc. I thought the other site to ask question was hard to use.
36. I like being able to work in groups and collaborate with others but I would also like if we went over more of the problems as a class as well, also I think it would be good if the class before an upcoming exam was more of a review structured class covering everything on the exam.

37. The TA's were very helpful when going through the problems and did their best to support everyone. I believe they should have review to the whole class more often.
